

#### PROFESSIONAL DESCRIPTION

##### SOOT REMOVER for WOOD OVENS and GRILLS :

- made of **304 Aisi 18/10 stainless steel** , 15 mm thick,
- **automatic operation with water fume treatment** ,
- filtering with G2 755 micro-stretched mesh filters,
- **water tank control** and distribution **via automatic float** ,
- high pressure stainless steel water pump, heat resistance 110°C,
- Unbreakable, explosion-proof **electrical control panel** .
- NB- IMPORTANT:
- The flue, downstream (... at the exit) of the machine, **must be airtight** , as the condensation that will form inside will have to **return/fall** either **inside the tank of the machine itself** , or conveyed into a drain.
- The machine, in addition to breaking down soot, creates a ' **draft effect** ' helping **to expel fumes** from the exiting flue.
- If the flue is **particularly long** , winding and **the use of an extractor** is necessary, it is important to maintain the air speed in the flue within certain parameters that will be provided by the manufacturer.
